← Java Access Modifiers / Specifiers →

[0]

In java, access modifiers are used to set the ~~is~~ accessibility (visibility) of classes, interfaces, variables, methods, constructors, data members and the setter methods.

→ For example,

```
class Animal
{
    public void method1()
    { ..... }

    private void method2()
    { ..... }
}
```

Access Modifier	Same class	Same package subclass	Same package non- subclass	Difference Package subclass	Different package non- subclass
Default	Yes	Yes	Yes	No	No
Private	Yes	No	No	No	No
Protected	Yes	Yes	Yes	Yes	No
Public	Yes	Yes	Yes	Yes	Yes
