→ [0]

Object class is present in java.lang package. Every class in java is directly or indirectly delivered from the Object Class.

If a class does not extend any other class then it is a direct child class of a object and if extends another class then it is indirectly of delivered.

Therefore the Object class methods are available to all java classes.

Hence Object class acts as a root of the inheritance hierarchy in any Java Program.

get Class ( ) ─────── clone ( )
